

Devops @ Machine learning startup

1 of 2

Our company

Yields.io is the first FinTech platform that uses AI for real-time model testing and validation on an enterprise-wide scale.

Our company has its headquarters in Brussels and was founded by Jos Gheerardyn and Sébastien Viguié in 2017. Our R&D team counts numerous senior data scientists and quantitative analysts while our sales team is composed of experienced risk management professionals. The company has its offices in London (UK) and in Gent (Belgium) and is backed by investments from Volta Ventures (early-stage European VC) and Michel Akkermans (serial entrepreneur, private investor, and former CEO and chairman of Clear2Pay).

You

We are looking for a DevOps who can help the R&D team to build and maintain our large-scale calculation infrastructure. Your main responsibilities will include

- Manage our Docker based processes
- Configure our internal and external networks
- Maintain our AWS cluster
- Support development, release and production of our applications involving data analytics and machine learning
- Help us maintaining both our SaaS as well as our on-premise deployed product.

Furthermore, our ideal candidate excels as an individual contributor and also values highly the power of working in a dedicated team. Finally, you should be prepared to roll up your sleeves and contribute

to a young and enthusiastic group of computer scientists, ML enthusiasts and entrepreneurs!

2 of 2

Musts

- Mastery of Docker engine, Docker compose, etc.
- Proper understanding of network setup
- Kubernetes
- At least 2Y of experience in a Devops role

Plus

- CCNA Security
- Experience with Jenkins CI
